* This service has the invoice. Already sent to the client.

This is the description of the mobile app development.

(Price chat history, app requirements, UX/UI design sketch data).

Mobile App Development for Dype.me

1. App requirement
 - a. One App Code for two systems: iOS and Android
 - b. We need the same platform as our current web application. So Main functions are the same, but we need to keep the functions as minimal as possible and as user friendly as possible. The functions are:
 - c. Sign-Up, Login (Apple Sign Up, Google Sign Up)
 - d. Backend of User should be accessible. Following Menüs are needed for Free + Premium User:
 - i. Menu point : Home + Search
 - ii. My Profile Settings, Darkmode activation, Upgrade, Author Stats, Datenschutzerklärung, AGB, All Posts (Edit Function)
 - e. On Content Pages same functions as on web platform
 - f. Follow/Defollow Function
 - g. Upvote Function for Content Pages

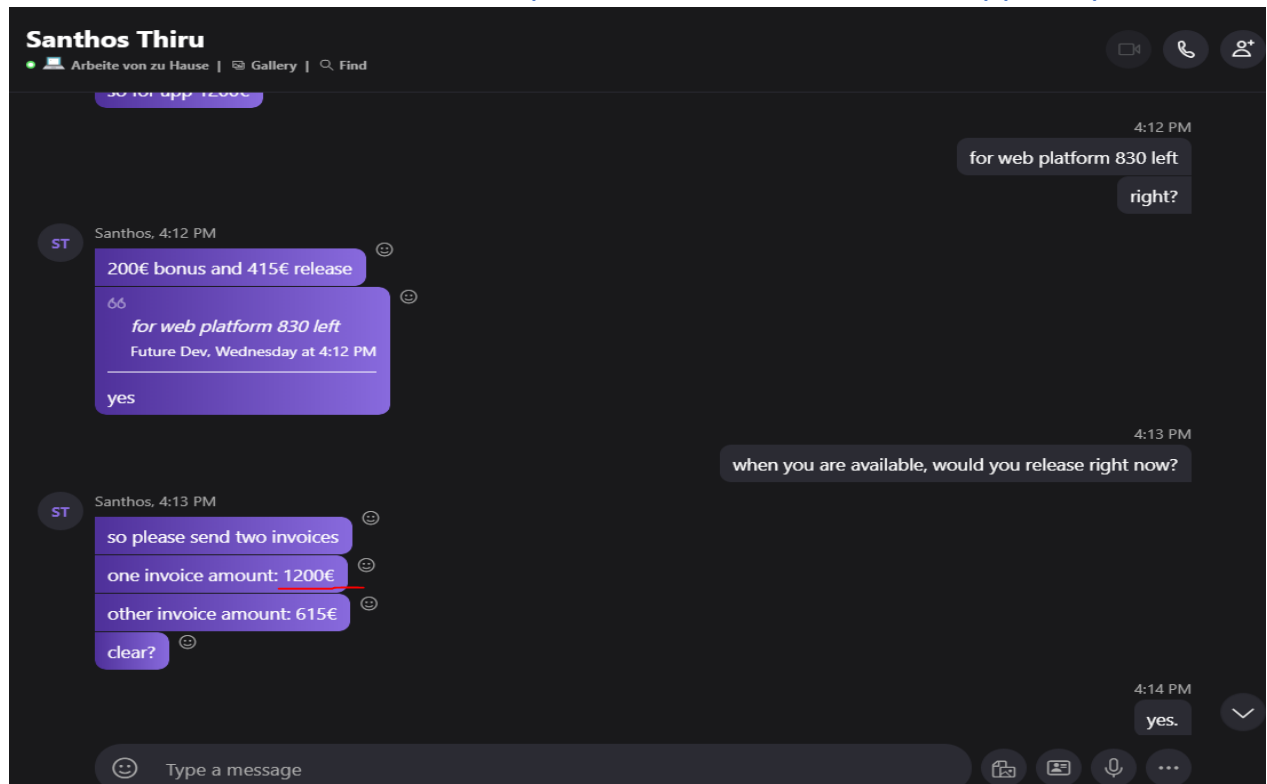

- h. Push Notification (which can be send from one main device). We can use Mobile Push from AWS for that.
 - i. We send a notification to user when he gets a new follower (every second day)
 - j. We send a notification to user when he gets a new upvote (every second day)
 - k. We send a notification to user when he gets a new upvote (every second day)
 - l. Search Function (Already implemented in the provided code).
 - m. All Advantages of Premium User should be usable in app like:
 - i. Mark Sentences
 - n. Save Articles
 - o. All functions of Free User must be usable in app.
 - p. Facebook SDK Implementation needed
 - q. Voice Implementation: Please check which implementation is possible for Siri and Google Assistant:
 - r. <https://developers.google.com/assistant>
 - s. <https://developer.apple.com/siri/>
 - t. AppStore Analytics needed: <https://developer.apple.com/app-store-connect/analytics/>. Is there any integration needed into the app? It seems not, please check.
 - u. Feed with new Followers, New Upvotes if the user is an author. Otherwise this feed does not exist.
 - v. Audio function must be included like Podcasts for every content page
 - w. If an user has an account and starts to read a content page, goes out of the app and comes back, we need to show him the article at the top with text: continue reading.
 - x. We should not show users articles which already have been read. Please note: **There is a difference between clicked and read.**
 - y. **(Subscription Model according to Google and Apples Requirements with Apple Pay and Google Pay Checkout (<https://developer.apple.com/appstore/subscriptions/>). Design like Apple provides) —> We need to check it.**
2. UX/UI design is below:
- a. [This is the mobile app UX/UI sketch and discussed specification. In this file, there are many kinds of screen sketch data.](#)

Wireframe App.pdf

This is the conversation about the price – 1200 EUR for Mobile app template

Price discussing image: 1200Euro is the price of the Mobile app development of the dype.me. (Advanced payment + UX/UI design sketch data)

The client confirm that the development content and cost describe in this document is correct.
